

Hi My Dear Student,

HR schema is pretty small database.

So I needed to create some tables that does not exist in this database. retired_employees is one of them.

Since table creation is a bit later as a subject, it will be enough for now, to run these queries with the order (with HR user).

```
create table retired_employees as select * from employees where job_id  
= 'IT_PROG';
```

```
insert into retired_employees values ('207', 'Omer', 'DAGASAN',  
'ODAGASAN', '555.555.555', '01-JAN-99', 'IT_PROG', 10000, null, 103, 60);
```

```
commit;
```

Best Regards,

Omer...
